WORK HISTORY

Software Engineer - Target Labs Inc.

Jan 2021 - Aug 2025

- Successfully implemented API integrations with external partners, resulting in seamless data synchronization.
- Automated 50+ quarterly financial reports using Python, slashing manual work from 8 hours to 30 minutes, significantly lowering the time required to generate each report.
- Optimized database queries, resulting in a 55% reduction in crucial cron job runtimes.
- Implemented and maintained inbound and outbound feeds with 85% of the company's suppliers.
- Integrated Docker into CI/CD pipelines, ensuring consistent builds and minimizing discrepancies between development, testing, and production environments.
- Designed and deployed robust, centralized logging solutions across multiple projects, facilitating proactive debugging and reducing production defects.
- Completed the PHP version upgrade of two major web properties from 7.1 to 8.0, eliminating deprecated features and enhancing performance by up to 35% in key workflows.
- Developed and implemented over 120 unit and integration tests to accompany other work, improving test coverage across core services by 20%, reducing deployment risks and regressions.

EDUCATION

University of Florida, Gainesville, FL
Bachelor of Arts and Sciences

May 2020

TECHNICAL SKILLS

Languages & Frameworks

- PHP (Laravel, Symfony), JavaScript (Node.js, React), REST API. Familiar with: Python, Java

Databases & Optimization

- MySQL, MS SQL, PostgreSQL, MongoDB, Query Optimization, Indexing & Performance Tuning

DevOps & Infrastructure

- Docker, Kubernetes, Git, Cloud Platforms (AWS), CI/CD (GitHub Actions, GitLab CI)

Testing & Performance

- Unit & Integration Testing, Logging & Monitoring (Kibana, Prometheus), SEO fundamentals

Project Management & Collaboration

- Agile, Scrum, API Integration, Cross-Team Communication, JIRA, Confluence, Documentation

ACCOMPLISHMENTS

- **Uhack 2019 (University of Miami) - 1st Place**
Developed a smart workout assistant with a team of peers, using Python code, sensor input, and computer vision to track reps and assess exercise form for injury prevention and training optimization. Collaborated with Microsoft representatives and a medical device manufacturer, Zensah, to create the workout compression sleeves.
